

Cover Letter — iOS Developer

Dear Hiring Manager,

I am an iOS Developer with around 3.5 years of experience building and maintaining mobile applications using Swift, SwiftUI, UIKit, and Combine. I have worked across the complete application development lifecycle — from understanding requirements and designing user interfaces to integrating APIs, implementing business logic, debugging, optimizing performance, and supporting production releases.

What I can bring to your team is practical experience in developing reliable and user-focused iOS applications. I have worked with MVVM and clean architecture, REST APIs, Firebase, Core Data, push notifications, Google Maps, Stripe, and other third-party SDKs. I am comfortable working with both UIKit and SwiftUI and enjoy improving existing applications as well as developing new features from scratch.

I am looking for an opportunity where I can contribute to real-world products, take ownership of features, solve technical problems, and continue growing as an iOS developer. I believe my hands-on experience, willingness to learn, and ability to work independently can help me contribute effectively to your development team.

You should consider me because I am not only focused on writing code; I care about building applications that are stable, maintainable, and provide a good user experience. I am also comfortable learning new technologies and adapting to different project requirements.

I am currently open to new opportunities and available to join immediately. I would appreciate the opportunity to discuss how my experience and skills could contribute to your team.

Thank you for your time and consideration.

Best regards,

Aditya Sharma

iOS Developer
